Health and wellbeing boards: developing a local outcomes framework for adults and older people

- This poster provides a tool for health and wellbeing boards to develop a local outcomes framework, through identifying and aligning shared priority outcomes from across the three existing national frameworks, for the NHS, public health and adult social care.
- A key focus for boards is to improve local outcomes linked to priorities set out in the Joint Health and Wellbeing Strategy (JHWS).
- Identifying an agreed set of outcome indicators can be a strong driver to joint working. Coherent outcomes can also encourage shared and integrated commissioning.
- Board members have a challenging task to align outcome indicators across the three separate outcome frameworks.
- Each board will need to identify indicators relevant to local priorities, shared between the frameworks, where different services should work together.
- In Nottinghamshire, board members collaboratively viewed visual maps of the three national frameworks to identify outcomes relevant locally for particular life stages, from birth to older age. Annotation was used to highlight links across the frameworks. Outcome measures identified for older people, a priority in the JHWS, include falls and injuries to over-65s, excess winter deaths, and deaths in usual place of residence.

The NHS outcomes framework 2012/13

- Highlighted items are shown as indicators – these are high-level outcomes across a range of health and care activities. All other non-highlighted items are improvement areas – where evidence suggests significant improvement in health outcomes is possible.

Public health outcomes framework 2013–16

- This poster was produced in November 2012 by the health and wellbeing learning set for adults and older people. This learning set is led by Liz Bruce, Strategic Director, Adults Health and Wellbeing, Manchester City Council.
